Kalkidan Demes Berta

SUMMARY

- 4+ years of experience in Mobile Application Development using Flutter as a Full Stack Developer
- Proficient in developing mobile applications in Flutter, Dart, Node.js, Firebase, Microsoft Visual Studio Code IDE, Android Studio, XCode
- Experienced in publishing and managing mobile applications on Google Play Store and Apple App Store, including handling signing, App Store Connect/TestFlight, and Play Console releases.
- Proficient in writing unit tests, widget tests, and integration tests in Flutter to ensure reliability and performance.
- Experienced in implementing end-to-end (E2E) testing using tools such as integration tests and automated pipelines to validate full app workflows.
- Experienced in building applications across multiple industries, including Payment Systems (E-wallets), E-commerce, Ridesharing, Remittance, and Agriculture Apps.

EDUCATION

B.Sc. in Computer Engineering, Bahirdar University (2015 - 2019)

Certificate in Software Engineering, Holberton University (2021 - 2022)

Certificate in Mobile App Development — Google Developer Group (Apr 2021 – Jun 2021)

TECHNICAL EXPERTISE

Mobile Technologies	:	Flutter, Dart, Firebase,
Programming Languages	:	Dart, JavaScript, TypeScript, Node.js
Database & ORM:	:	Firestore, Hive, MongoDB, SQLite
Cloud	:	Firebase, App Store & Play Store deployment
Version Control	:	GIT, GITHUB
Tools & IDEs:	:	VS Code, Android Studio, Xcode, Postman

EXPERIENCE DETAILS

Working as a Software Engineer for **Step Innovations Africa, Remote**, May **2024 – Till Date.**

I worked as a Software Engineer for **Ciya Sarl**, Remote, **Sept 2022 – Mar 2023.**

I worked as a Lead Mobile App Developer for **BelCash Technologies**, Addis Ababa, Oct **2021 – May 2024.**

PROJECT DETAILS

Project #1:
Client: FAO (Step Innovations Africa), May'2024 to Oct'2025

Role: Software Developer

Project: Consumer Mobile Application

The app provides real-time weather updates, market commodity prices, and personalized notifications for crop care, pest control, and disease management. Integrated AI-based features help detect crop diseases early and recommend appropriate interventions. Farmers can also access community forums to share knowledge and best practices, monitor soil and crop health, and make data-driven decisions to optimize yield and productivity.

Responsibilities:
- Creating User Interface Using Flutter.
- Involved in the coding of this project.
- Involved in Unit Test Cases.
- Integrated REST APIs and Firebase.

Environment: Flutter, Dart, Firebase, Firestore, Hive, REST APIs, Android Studio, Xcode.

Project: #2
Client: FAO (Step Innovations Africa), May'2024 to Oct'2025.

Role: Software Developer

Project: Consumer Web Application

Developed a web-based administration platform to manage and monitor mobile applications, providing regional admins and super admins with full control over data and workflow. The platform allows admins to input, update, and approve user data, input app contents, and monitor system activities in real time. It also enables managing user access, generating reports, and sending targeted notifications to mobile users. The system ensures smooth operational control across multiple regions and streamlines administrative tasks.

Environment: Flutter Web, Firebase, Firestore, REST APIs, Hive.

Responsibilities:
- Designed and implemented admin dashboards.
- Integrated REST APIs to synchronize data between the web admin platform and mobile apps.
- End-to-end software design and development
- unit testing
- Fixing bugs/issues reported by the team.

Environment: Flutter Web, Firebase, Firestore, REST APIs, Hive

Project #3:
Client: Ciya Sarl, Oct' 2022 to Apr 2023.

Role: Software Engineer

Project: Ride Sharing App

Developed a ride-sharing mobile application with separate interfaces for drivers and clients, providing a seamless and secure transportation experience. The app enables clients to request rides, track drivers in real time, and make payments, while allowing drivers to manage ride requests, optimize routes, and track earnings.

Driver App: Manage ride requests, accept or reject trips, and optimize routes in real time.

Client App (End User): Request rides, track driver location in real time, and view trip history.

Responsibilities:
- End-to-end software design and development
- Involved in Unit Test Cases.
- Deployed app to production on Google Play Store and Apple App Store.

Environment: Flutter, Dart, Firebase, Firestore, Hive, REST APIs, Google Maps, Push Notifications

Project #4:
Client: WFP (Belcash), **Aug'2022 to Apr 2023**

Role: Mobile App developer

Project: Helloopass-WFP

Developed a voucher-based e-wallet platform that enables merchants to distribute aid or benefits to beneficiaries in a secure and trackable manner. Merchants receive a preloaded balance in vouchers, which beneficiaries can redeem at participating merchant locations to access food, supplements, or other resources. The system ensures transparency, real-time tracking of voucher usage, and proper record-keeping for both administrators and merchants.

Responsibilities:
- Involved in the design and coding of the project.
- Involved in Unit Test Cases and E2E tests.
- Deployed app to production on Google Play Store and Apple App Store.

Environment: Flutter, Dart, Firebase, Firestore, Hive, Node.js, REST APIs, Push Notifications.

Project #5:
Client: Belcash Technology Solutions, **Aug'2022 to Apr 2024**

Role: Lead mobile app developer

Project: Helloopass

Developed a user-focused e-wallet application enabling users to top up balances, send money, and make transactions at participating merchants in a closed-loop Visa-like system. Users can securely pay for goods and services using their wallets, view transaction histories, and manage their funds in real time. The platform ensures seamless payments, secure authentication, and a smooth user experience for financial transactions.

Responsibilities:

- Led the design and development of Flutter mobile apps, defining architecture, coding standards, and best practices.
- Coordinated with backend teams to integrate secure payment processing and API integrations.
- Conducted code reviews to ensure quality and maintainability.
- Ensured deployment to production on Google Play Store and Apple App Store with proper version control.

Environment: Flutter, Dart, Node.js, Firebase, Firestore, Hive, REST APIs, Push Notifications

Project #6:

Client: Belcash Technology Solutions, ⍰ **Oct'2021 to June'2022**

Role: Mobile app developer

Project: OneLoan

A comprehensive microfinance solution that includes a mobile app for members to apply for loans and a web admin platform for administrators to manage loan requests and related functionalities. Members can submit loan applications, track status, and view repayment history, while admins can approve or reject requests, monitor repayments, and generate reports. The platform ensures secure, transparent, and efficient loan management for both users and administrators.

Responsibilities:

- End-to-end software design and development
- Built the backend system using Node.js and MongoDB to handle loan processing, user management, and data storage.
- Developed Flutter Web admin platform to manage loan applications, user accounts, and system workflows.
- Implemented data synchronization and REST APIs between mobile apps and backend.
- Wrote unit and integration tests to ensure app reliability and performance.

Environment: Flutter, Dart, Node.js, MongoDB, Flutter Web, Firebase (Push notifications), REST APIs
